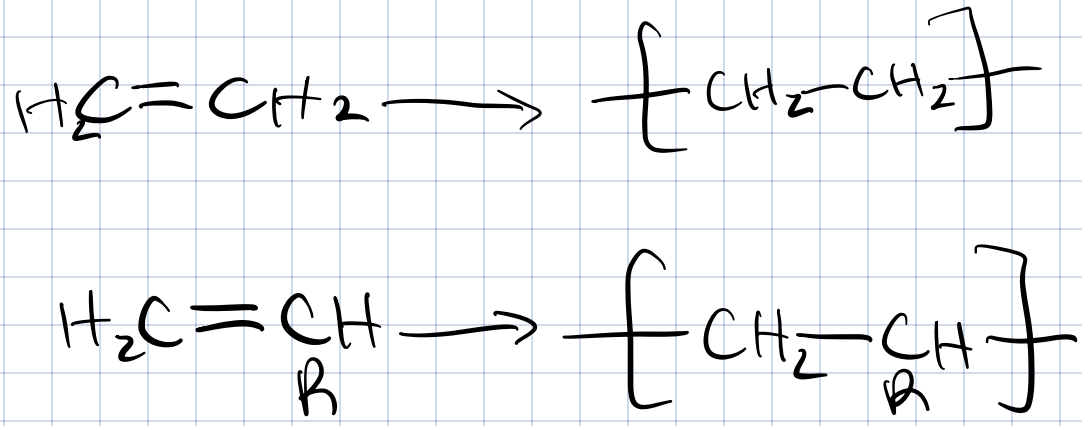
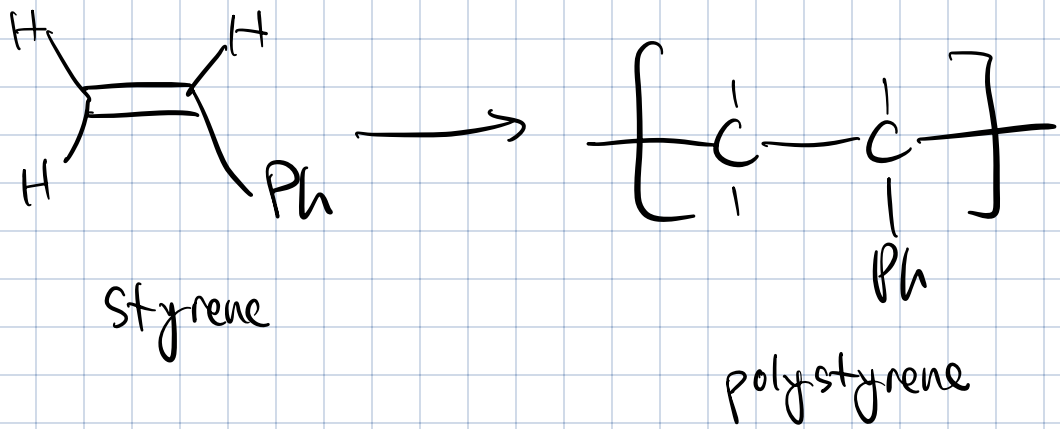
Monomer: A

Y–A–A–A–A–A ... –A–Z

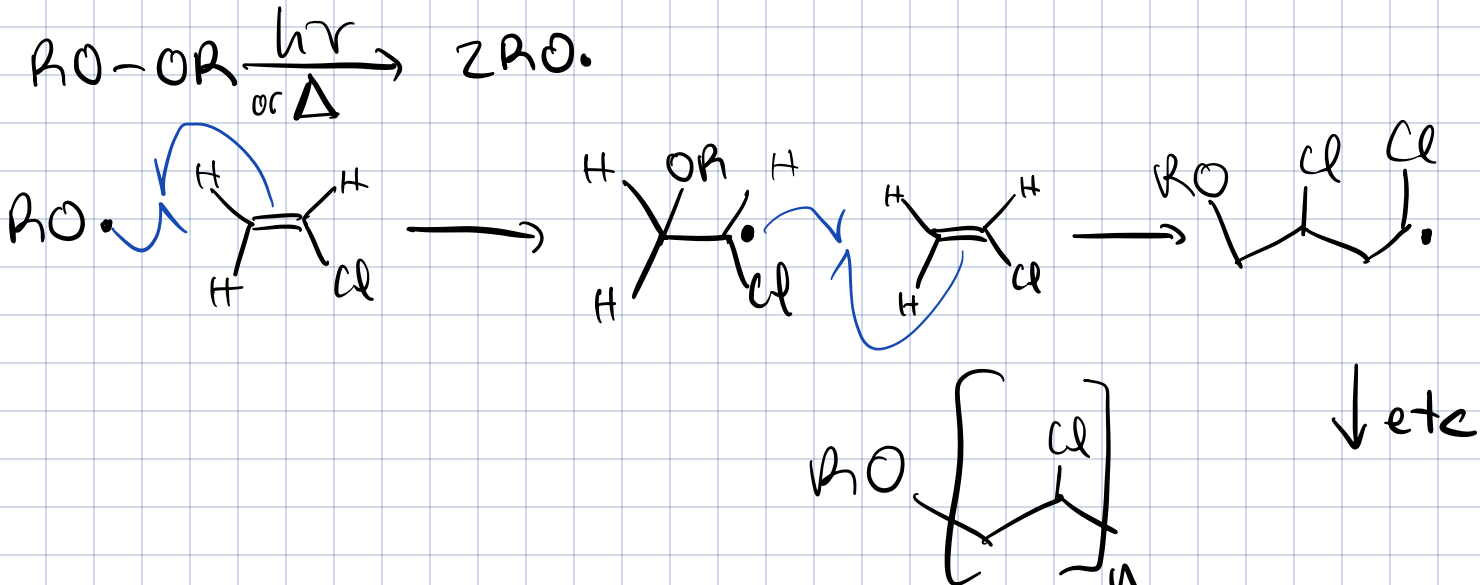




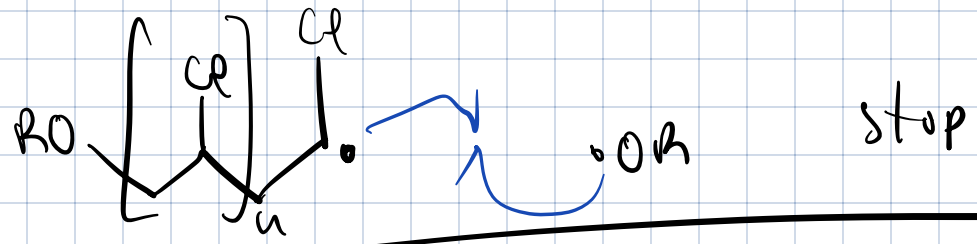
Mechanism

1. Radical Polymerization

– Radical Initiator



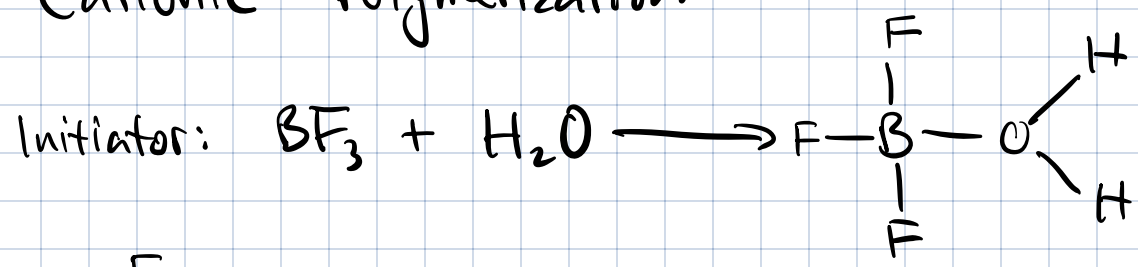
– Termination

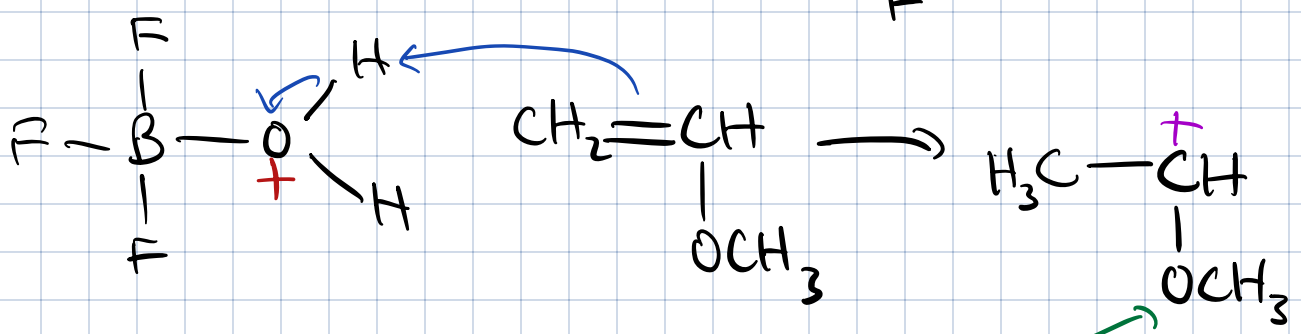


stop

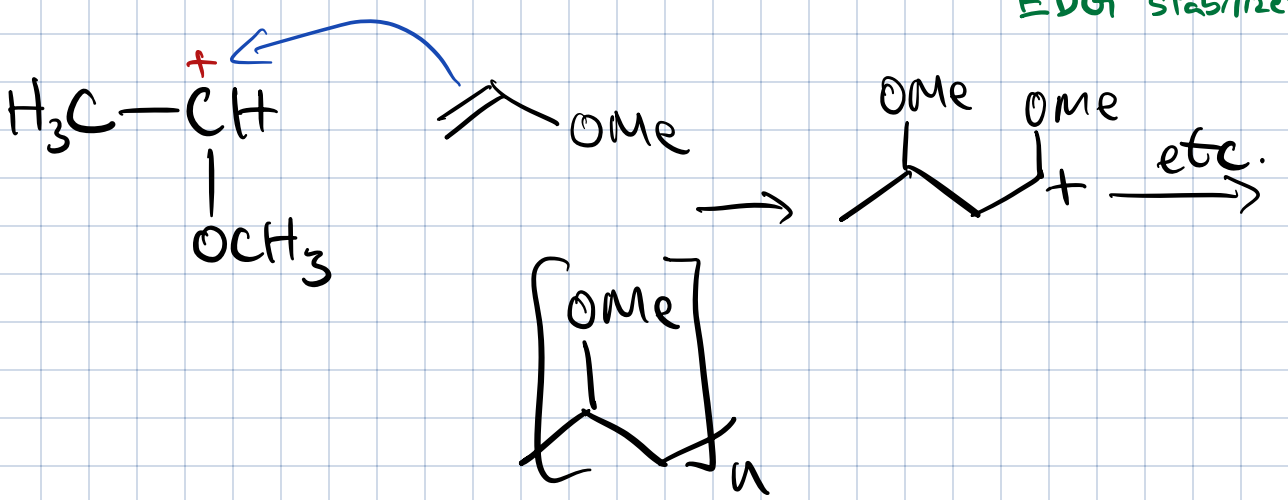
Cationic Polymerization

Initiator: $BF_3 + H_2O \longrightarrow$

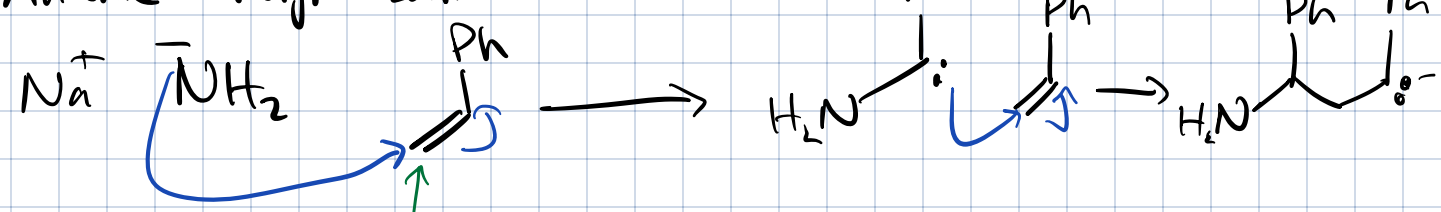




EDG stabilizes

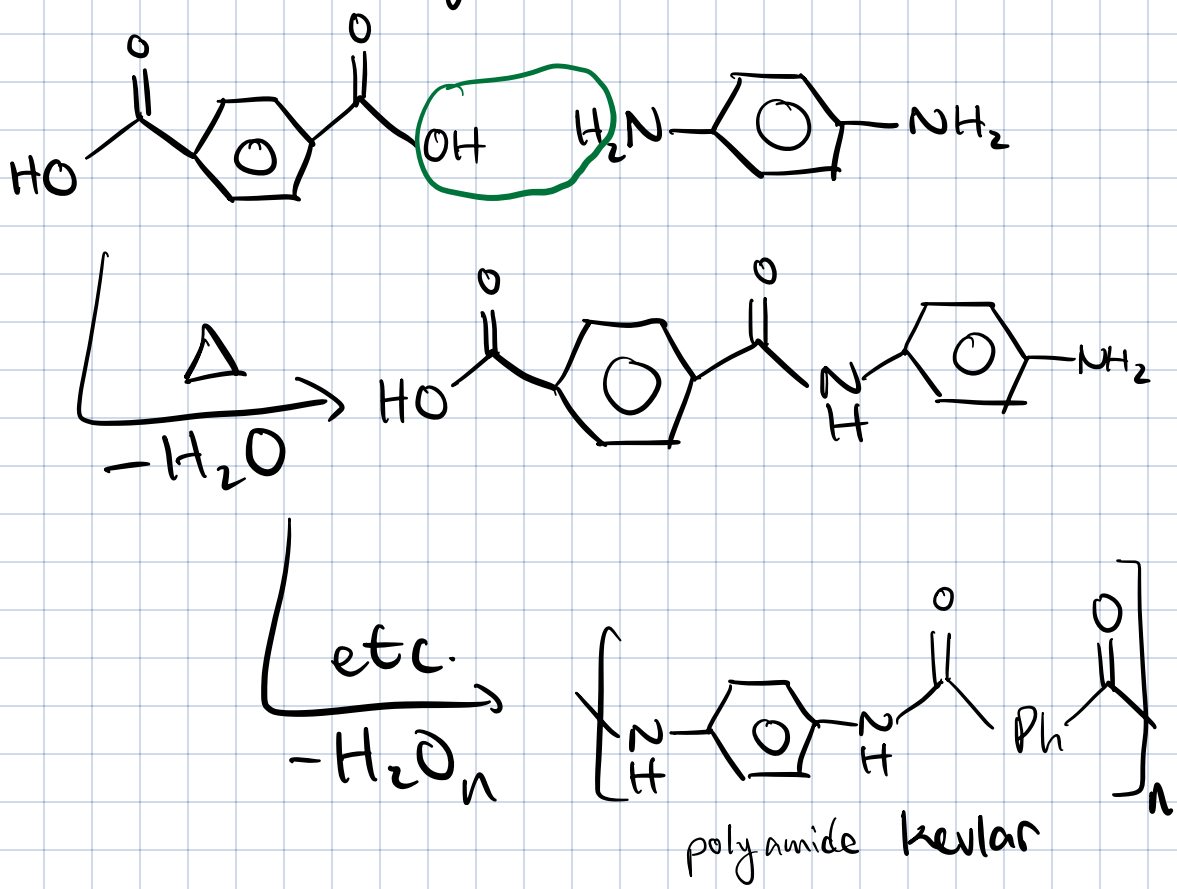


Anionic Polymerization

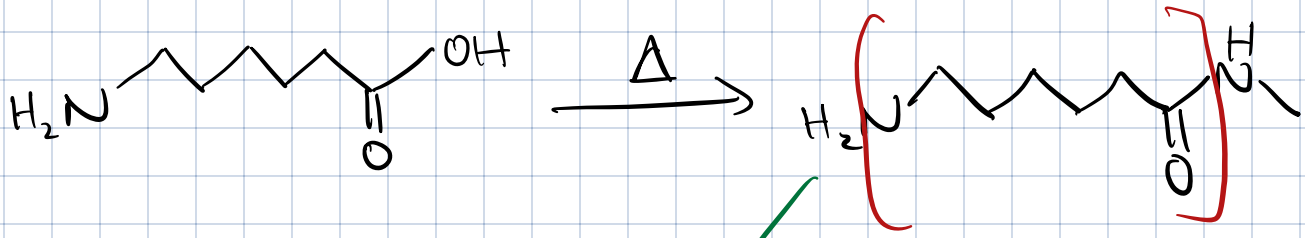


more accesible, & resonance stabilized to o-p positions

Condensation Polymerization



polyamide **kevlar**



basically protein polyamide
