
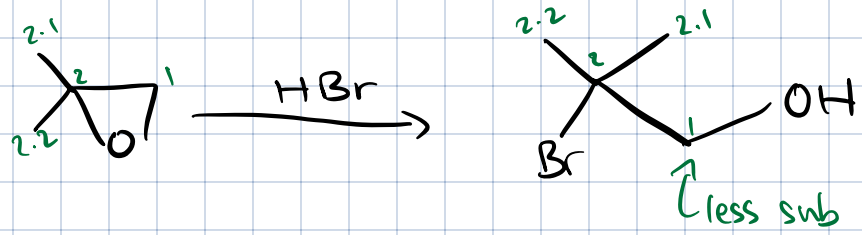
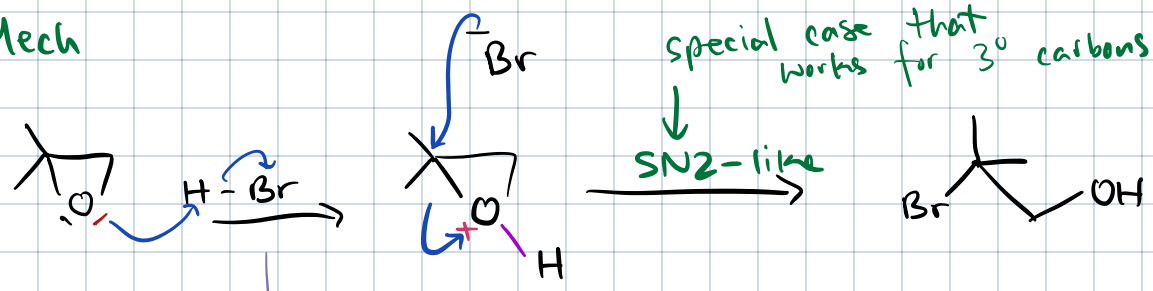
TLDR: acidic → opens on more subbed side
basic → opens on less subbed side

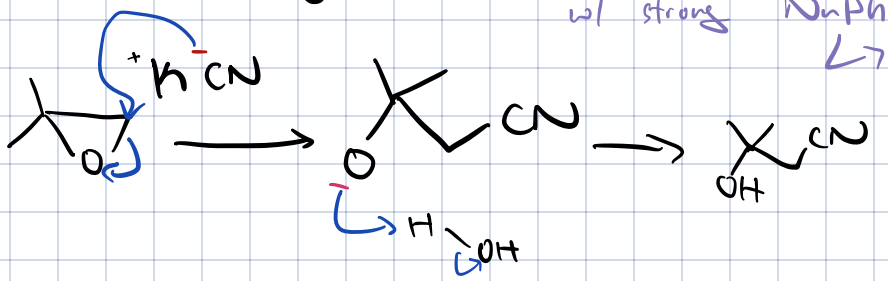
Acidic



Mech



If reagent isn't a strong acid (ROH for example), just add H_2SO_4, which will push the 1st step.

Basic Media (Strong NuPh) → called "basic" but rlly just means w/ strong NuPh


↳ Ex. CN^- not that strong of a base, very strong nucleophile
